

What we provided:

- ◇ Full site survey and feasibility study
- ◇ 2x 22kW Ensto smart charger
- ◇ 1x 10kW Hitachi Vehicle-to-Grid charge point
- ◇ 1x 50kW EVBox rapid charger

Project Details:

EV owners at Hartham Park are able to top their vehicles up in under an hour thanks to the 50kW EVBox rapid charger, charge, as well as discharge, on the 10kW Hitachi Vehicle-to-Grid unit or charge for the duration of their stay with the 2 22kW Ensto smart chargers. The complex site required an upgraded supply and energy generation certificates for the Vehicle-to-Grid unit, all of which were handled by MyEVS.

In addition to this, Hartham Park is a Grade II listed property, which meant extra thought and care had to be put in to ensure the installation was in keeping with its surroundings.

Hartham Park was also able to part-fund the installation through the Office for Zero Emission Vehicles (OZEV) Workplace Charging Scheme
